Buenos Aires, Argentina — Global remote support

LANGUAGES

Spanish: **Native**
English: **B2 Fluent**

CERTIFICATIONS

- Red Hat Certified Engineer (RHCE): OpenShift Admin I & II
- Red Hat Certified System Administration (RHCSA)

ADDITIONAL TRAINING

- Ethical Hacking Expert
- Linux System Administrator
- Backend Web Developer

TECHNICAL STACK

Virtualization / Cloud

Cisco UCS, VMware ESXi, Proxmox, VirtualBox, AWS, OpenShift, VPN

Automation

Ansible, Puppet, Control-M, Rundeck

DevOps

Jenkins, GitLab, Git, Docker, Podman, Kubernetes

Observability

AppDynamics, Zabbix, Grafana, Nagios, Checkmk

Security & Credential Management

CyberArk, TPAM, Nessus, CrowdStrike, BHOM, TeamPass, Vaultwarden

Professional Profile

Infrastructure Consultant with over 25 years of experience administering critical systems in large-scale production environments. Expert in Red Hat ecosystems, advanced virtualization, and infrastructure automation. Specialist in defining baseline configurations, vulnerability remediation, and technical team leadership focused on operational efficiency and industry standards.

Areas of Expertise

- **1. Infrastructure: Servers and Cloud Solutions**
 - **Systems Architecture:** Design and deployment of high-availability environments on critical hardware (Cisco UCS) and virtualization platforms (VMware ESXi, Proxmox, VirtualBox).
 - **Management and Orchestration:** Lifecycle administration of systems with Red Hat Satellite, Red Hat Fuse, and Red Hat 3scale API Management.
 - **Cloud Ecosystems and Networking:** Implementation of solutions on AWS, OpenShift deployment, and secure connectivity configuration (VPN).
- **2. Cybersecurity: Auditing and Recovery**
 - **Security and Access:** Management of identities and privileged access (CyberArk, TPAM).
 - **Vulnerabilities:** Analysis, remediation, and patch deployment using Nessus, CrowdStrike, and BHOM under compliance standards.
 - **Endpoint Protection:** Implementation of perimeter security solutions, antivirus, and firewalls.
- **3. Development: Automation and DevOps**
 - **Infrastructure as Code and Interventions:** Automation using Ansible, Puppet, Control-M, Rundeck.
 - **CI/CD and Containers:** Workflow integration with Jenkins, GitLab, and Git. Environment management with Docker, Podman, and Kubernetes.
 - **Observability:** Performance monitoring and analysis with AppDynamics, Zabbix, Grafana, Nagios, Checkmk.
- **4. Documentation: Procedure Management**
 - **Standardization:** Structuring knowledge bases and technical guides aligned with ISO 9001 and ISO 27001 standards.
 - **Credential Management:** Implementation and administration of password vaults for secure, shared access storage (TeamPass, Vaultwarden).
 - **Service Management:** Development of operational manuals and technical escalation workflows.
- **5. Hardware and Software: Equipment Management**
 - **On-Site Support:** Advanced diagnostics and repair of workstations, servers, and industrial peripherals.
 - **Lifecycle Management:** Software update management, preventive maintenance, and performance optimization to extend asset lifespan.
- **6. Operating Systems: Platform Management**
 - **Linux Ecosystem:** Deployment, hardening, and full administration of Unix & Linux distributions.
 - **Windows Environments:** Administration of servers and workstations, including support for legacy systems critical to operational continuity.
 - **Interoperability:** Configuration of multi-platform services and hybrid environments, ensuring native system stability and security.
